ASX: GML

16 March 2026

DRILLING COMMENCED AT GREAT WESTERN

FIRST SYSTEMATIC DRILL PROGRAM UNDERWAY AT TOP PRIORITY GOLD TARGET

HIGHLIGHTS

- Drilling commenced last week at Gateway's top priority, at-surface gold target, Great Western – the first ever systematic drill program at the prospect.
- Previous work at Great Western identified a coherent differentiated dolerite unit along the western margin of the primary Great Western Shear Zone.
- This unit displays textural zonation analogous to major Eastern Goldfields deposits such as the Jundee Deposit, as well as the Junction deposit in the St Ives Gold Camp.
- The target is also defined by expansive gold-in-soil anomalies and extensive nugget discoveries, which straddle the sheared eastern margin of the dolerite for the entire sampled length.
- The dolerite unit has a total apparent strike length of 16 km in magnetic imagery, with the outcropping 7km portion the focus of initial drilling.
- This is the first time Great Western has been subject to a systematic drill program.
- Gateway expects drill programs to be expanded at the target over the coming months – updates on additional rigs will be provided in due course.
- Gateway remains well capitalised to undertake planned 2026 exploration, with \$19.4m cash and \$9.3m in liquid ASX securities at the end of the December 2025 quarter.

Management Comment

Gateway's Chief Executive Officer, Mr Richard Pugh, said: "We've been building towards this drill program since first delineating the extensive surface gold anomalism¹ (plus the many hundreds of nuggets which have since been found)² along the outcropping portion of the system back in September 2025. Subsequent work, including high-resolution geophysical surveys and detailed mapping³, has defined what has to be one of the most exciting gold targets to be drilled in the Western Australian goldfields right now. This is especially so given that mineralisation is expected from surface.

The sheared dolerite margin – which is where initial drilling is currently focused – represents an optimal host for gold mineralisation due to the high competency contrast between the intermediate volcanics, competent Archaean basement and the dolerite unit itself. This target has textbook structural and lithological characteristics which show striking similarity to some of the most significant dolerite-hosted gold camps in the Eastern Goldfields, most notably the Jundee and Junction deposits.

Two aircore rigs have commenced systematically drill testing the full 16 km dolerite strike, with an initial focus on areas of strongest surface gold anomalism¹ and gold nugget exposure² (Figures 1 and 2). RC drilling will commence in approximately two weeks, and will focus on areas of increased veining and alteration intersected throughout the aircore drilling campaign, as well as testing the differential dolerite unit plus areas where the aircore rig could not penetrate deep enough.

This initial drill program is anticipated to take 3 months to complete, with assays being released to the market as they are received, however the Company expects to rapidly scale up exploration and drilling programs in the coming months."

Competent Person Statement

The information in this announcement that relates to Exploration Results and Mineral Resources has been extracted from various Gateway ASX announcements and are available to view on the Company's website at www.gatewaymining.com.au or through the ASX website at www.asx.com.au (using ticker code "GML").

The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement and that all material assumptions and technical parameters underpinning the Mineral Resource Estimates in the relevant market announcement continue to apply and have not materially changed. The company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

Forward Looking Statement

This announcement may contain certain forward-looking statements, guidance, forecasts, estimates, prospects, projections or statements in relation to future matters that may involve risks or uncertainties and may involve significant items of subjective judgement and assumptions of future events that may or may not eventuate (**Forward-Looking Statements**). Forward-Looking Statements can generally be identified by the use of forward-looking words such as "anticipate", "estimates", "will", "should", "could", "may", "expects", "plans", "forecast", "target" or similar expressions and may include, without limitation, statements regarding plans, strategies and objectives of management, anticipated production and expected costs. Indications of, and guidance on future earnings, cash flows, costs, financial position and performance are also Forward Looking Statements.

Persons reading this announcement are cautioned that such statements are only predictions, and that actual future results or performance may be materially different. Forward-Looking Statements, opinions and estimates included in this announcement are based on assumptions and contingencies which are subject to change, without notice, as are statements about market and industry trends, which are based on interpretation of current market conditions. Forward-Looking Statements are provided as a general guide only and should not be relied on as a guarantee of future performance.

No representation or warranty, express or implied, is made by Gateway that any Forward-Looking Statement will be achieved or proved to be correct. Further, Gateway disclaims any intent or obligation to update or revise any Forward-Looking Statement whether as a result of new information, estimates or options, future events or results or otherwise, unless required to do so by law
