20 November 2026

MULTIPLE HIGH-ORDER GOLD ANOMALIES DEFINED AT GLENBURGH SOUTH

HIGH-GRADE SOIL RESULTS UP TO 88PPB AU STRENGTHEN DISCOVERY POTENTIAL

HIGHLIGHTS

- **Additional soil sampling has materially strengthened previously announced gold anomalies at Glenburgh South.**
- **Peak soil results of 88ppb Au (GSS0611), 79ppb Au (GSS0987), 79ppb Au (GSS0535) and 65ppb Au (GSS2033) returned from the regional soil program.**
- **Multiple coherent gold anomalies now defined over kilometre-scale strike lengths (Figure 1).**
- **Results compare favourably with early-stage gold-in-soil anomalism recognised within the nearby Falcon Metals (ASX:FAL) Olsen Well prospect discovery, where regional geochemistry proved instrumental in identifying a significant underlying gold system.**
- **Several of the strongest gold anomalies (>10ppb Au) occur along interpreted east-west fault structures, that run parallel to both the nearby Falcon Metals Olsen Well discovery and the Benz Mining Ltd Glenburgh Gold Project.**
- **First-pass drill target testing is scheduled for Q1-2027.**
- **Gateway remains extremely well capitalised to undertake all planned exploration, with $52.8m cash at the end of the September 2026 Quarter.**

Management Comment

Gateway's Managing Director, Mr Richard Pugh, said: *"These latest results continue to build a compelling exploration story at Glenburgh South and significantly strengthens our confidence that we are vectoring towards a large-scale gold system.*

The scale and coherence of anomalism we are now seeing is particularly encouraging given the early stage of exploration and the broad spacing of the sampling undertaken to date.

Importantly, recent exploration success elsewhere in the district demonstrates the effectiveness of regional soil geochemistry as a discovery tool. At the nearby Falcon Metals Ltd (ASX:FAL) Olsen Well discovery, large-scale gold-in-soil anomalism provided the initial vector towards the identification of a significant underlying gold system. Many of the strongest gold anomalies defined to date are spatially associated with interpreted east-west fault structures that cut across the broader mineralised corridor. These structures are considered highly prospective as they are analogous to the structural settings recognised at both the Olsen Well discovery and Benz Mining Corp's (ASX:BNZ) Glenburgh Gold Project, where fault-controlled mineralisation has played a significant role in localising gold mineralisation. The coincidence of elevated gold values and favourable structural architecture provides us with increased confidence in the quality of the targets emerging at Glenburgh South.

www.gatewaymining.com.au

With multiple kilometre-scale anomalies now defined, a favourable structural setting and only limited historical exploration, we believe Glenburgh South has the potential to emerge as an important new gold camp within the broader Glenburgh district.

Our focus is now on rapidly advancing the project through infill geochemical programs, geological mapping and first-pass drill testing."

Introduction

Gateway Mining Limited (ASX: GML) (**Gateway** or the **Company**) is pleased to report additional assay results from its regional soil sampling program at the Glenburgh South Project in Western Australia, with the latest results significantly increasing the scale and tenor of previously announced gold-in-soil anomalies.

New Gold Targets

The latest soil sample results build upon Gateway's previously announced regional soil sampling program[1], which identified two extensive gold-in-soil anomalies extending for approximately four kilometres within the Glenburgh South Project area.

These additional assays have highlighted several higher tenor anomalies and defined several centres of elevated gold values that are considered priorities for follow-up exploration. The results confirm the widespread nature of gold anomalism across the Glenburgh South Project and continue to demonstrate the fertility of the broader mineralised system.

Emerging Gold Camp

The significance of the Glenburgh South results can be viewed in the context of recent exploration success within the broader Glenburgh district, where systematic surface geochemistry has proven highly effective in identifying concealed gold systems.

At the nearby Falcon Metals Olsen Well prospect discovery, regional soil sampling outlined a large and coherent gold-in-soil anomaly extending over several kilometres prior to the identification of significant bedrock gold mineralisation. Falcon Metals Limited has highlighted the important role that regional geochemistry played in defining and prioritising targets within this emerging mineralised corridor.

Importantly, a number of the strongest anomalies at Glenburgh South occur in association with interpreted east-west trending fault structures (Figure 2). These structures are considered particularly prospective as they display strong similarities to the structural architecture associated with both the Falcon Metals Olsen Well prospect discovery and the nearby Benz Mining Ltd Glenburgh Gold Project, where fault-controlled mineralisation is recognised as an important feature across the overall mineralised system.

The emerging relationship between elevated gold values and structurally favourable east-west fault corridors is regarded as a significant development in Gateway's understanding of the project. Several of the priority anomalies occur directly along these interpreted structures, while others are positioned in close proximity to interpreted fault intersections, which may represent favourable sites for fluid focusing and gold deposition.

Gateway believes this combination of extensive gold anomalism, favourable structural controls and strategic location immediately south of the Benz Mining Corp's Glenburgh Gold Project significantly enhances the prospectivity of the project and provides increasing confidence that Glenburgh South may represent part of a larger district-scale mineralised gold camp.

Ongoing Exploration and Next Steps

With respect to the next steps, Gateway's immediate focus will be on:

- Completing geological mapping and rock-chip sampling across the newly identified anomalies;
- Undertaking infill soil sampling where warranted;
- Further refining the structural interpretation of the project area;
- Integrating geochemical, geological and geophysical datasets; and
- Generating priority targets for first-pass drill testing scheduled to commence Q1-2027.

Competent Person Statement

The information in this report that relates to Exploration Results is based on information compiled or reviewed by Mr Richard Pugh who is Gateway Mining Ltd's Managing Director and is a current Member of the Australian Institute of Geoscientists (AIG). Mr Pugh has sufficient experience, which is relevant to the style of mineralisation and types of deposit under consideration and to the activities undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code of Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Pugh consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.

Forward Looking Statement

This announcement may contain certain forward-looking statements, guidance, forecasts, estimates, prospects, projections or statements in relation to future matters that may involve risks or uncertainties and may involve significant items of subjective judgement and assumptions of future events that may or may not eventuate (**Forward-Looking Statements**). Forward-Looking Statements can generally be identified by the use of forward-looking words such as "anticipate", "estimates", "will", "should", "could", "may", "expects", "plans", "forecast", "target" or similar expressions and may include, without limitation, statements regarding plans, strategies and objectives of management, anticipated production and expected costs. Indications of, and guidance on future earnings, cash flows, costs, financial position and performance are also Forward Looking Statements.

Persons reading this announcement are cautioned that such statements are only predictions, and that actual future results or performance may be materially different. Forward-Looking Statements, opinions and estimates included in this announcement are based on assumptions and contingencies which are subject to change, without notice, as are statements about market and industry trends, which are based on interpretation of current market conditions. Forward-Looking Statements are provided as a general guide only and should not be relied on as a guarantee of future performance.

No representation or warranty, express or implied, is made by Gateway that any Forward-Looking Statement will be achieved or proved to be correct. Further, Gateway disclaims any intent or obligation to update or revise any Forward-Looking Statement whether as a result of new information, estimates or options, future events or results or otherwise, unless required to do so by law.

APPENDIX B: JORC TABLE 1 – YANDAL PROJECT

Section 1 Sampling Techniques and Data

Criteria	JORC Code explanation	Commentary
Sampling techniques	• *Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.* • *Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.* • *Aspects of the determination of mineralisation that are Material to the Public Report.* • *In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.*	• A total of 2,005 surface soil samples were collected using a -177um sieve and samples (50g of material) were collected in pre-numbered paper packets. These samples were submitted to ALS in Perth for gold (code: Au-TL44).
Drilling techniques	• *Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).*	• No drilling is reported in this announcement.
Drill sample recovery	• *Method of recording and assessing core and chip sample recoveries and results assessed.* • *Measures taken to maximise sample recovery and ensure representative nature of the samples.* • *Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.*	• No drilling is reported in this announcement.
Logging	• *Whether core and chip samples have been geologically and*	• Each soil sample site was recorded in both hardcopy and digital format

Criteria	JORC Code explanation	Commentary
	geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. • *Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.* • *The total length and percentage of the relevant intersections logged.*	that included; tenement ID, sampler ID, sample medium, regolith/regime, date sampled, moisture content, colour and general site observations. These were imported into the Gateway Mining Ltd database.
Sub-sampling techniques and sample preparation	• *If core, whether cut or sawn and whether quarter, half or all core taken.* • *If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.* • *For all sample types, the nature, quality and appropriateness of the sample preparation technique.* • *Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.* • *Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling.* • *Whether sample sizes are appropriate to the grain size of the material being sampled.*	• Standard reference material was inserted into every 50th sample sequence as to monitor laboratory QAQC processes.
Quality of assay data and laboratory tests	• *The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.* • *For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.* • *Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.*	• ALS performed analysis checks and inserted CRM into the sample sequence prior to analysis.
Verification of sampling and assaying	• *The verification of significant intersections by either independent or alternative company personnel.* • *The use of twinned holes.*	• All data is managed and hosted by Mitchell River Group who acted as the Database Manager for Gateway Mining Ltd. • No drilling is reported in this announcement.

	• *Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.* • *Discuss any adjustment to assay data.*	
Location of data points	• *Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.* • *Specification of the grid system used.* • *Quality and adequacy of topographic control.*	• The grid system used was MGA2020 Zone 50 and soils were collected using a handheld Garmin GPS that has an accuracy of +/- 3m.
Data spacing and distribution	• *Data spacing for reporting of Exploration Results.* • *Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.* • *Whether sample compositing has been applied.*	• No drilling is reported in this announcement. • No sample composite has been applied.
Orientation of data in relation to geological structure	• *Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.* • *If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.*	• Soils were collected perpendicular to the strike of known geological trends.
Sample security	• *The measures taken to ensure sample security.*	• Samples were collected by Omni GeoX (a contractor of the Company) field personnel and taken directly to ALS Laboratory in Perth for analysis. Sample details, dispatch information and analysis method were recorded in both hardcopy and digital format.
Audits or reviews	• *The results of any audits or reviews of sampling techniques and data.*	• No audits or reviews have been completed on the sampling techniques, but company standard operating procedures were adhered to, which is regarded as industry best practice.

Section 2: Reporting of Exploration Results

(Criteria listed in section 1, also apply to this section.)

Criteria	JORC Code explanation	Commentary

Mineral tenement and land tenure status	• *Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.*
	• *The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.*
		• Gateway Mining Ltd has an 80% interest across the following tenure:
		  ○ E09/2957
		  ○ E09/2632
		  ○ E09/2769
		  ○ E09/2762
		  ○ E09/3013 (currently in application – 80% on grant)
		• 20% free carried by original vendors of Glenburgh South Project until definitive feasibility study.
		• 1.0% Gross Return Royalty to Quinn Royalty Pty Ltd on the above tenure.
		• Gateway Mining Ltd has 100% ownership of the following tenements:
		  ○ E09/3036 (currently in application)
		  ○ E09/3037 (currently in application)
		  ○ E09/3039 (currently in application)

Exploration done by other parties	• *Acknowledgment and appraisal of exploration by other parties.*	• Historic exploration by Normandy in 1994-95, confirmed the area's potential, identifying a series of significant gold anomalies from stream sediment samples. The samples indicate gold grades up to 6.6ppb, consistent with the gold grades found in the stream sediment samples taken across the nearby Glenburgh deposit. One zone of anomalism in particular on E09/2632 was followed up with a program of closer spaced soil samples (400 metre by 200 metre spacings). In conjunction with this work, a regional ground gravity survey was re processed with the results from both sets of work highlighting an anomalous 13-kilometre surface gold anomaly, positioned on an identical structure to the one that hosts the 510Koz Glenburgh gold deposit.

Criteria	JORC Code explanation	Commentary
Geology	• *Deposit type, geological setting and style of mineralisation.*	• The project area is located in the Palaeoproterozoic Gascoyne Complex, the high-grade metamorphic core of the Capricorn Orogen. This project shares very similar geological characteristics and setting to the world class Tropicana gold discovery. The potential of the gneissic metamorphic belts surrounding the Yilgarn craton were only recognised in the last few decades – they remain highly underexplored presenting a substantial opportunity.
Drill hole Information	• *A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:* ○ *easting and northing of the drill hole collar* ○ *elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar* ○ *dip and azimuth of the hole* ○ *down hole length and interception depth* ○ *hole length.* • *If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.*	• No drilling is reported in this announcement.
Data aggregation methods	• *In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.* • *Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.* • *The assumptions used for any reporting of metal equivalent values should be clearly stated.*	• No drilling is reported in this announcement. No data aggregation methods or metal equivalents have been applied to these exploration results.

Criteria	JORC Code explanation	Commentary
Relationship between mineralisation widths and intercept lengths	• *These relationships are particularly important in the reporting of Exploration Results.* • *If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.* • *If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').*	• No drilling is reported in this announcement.
Diagrams	• *Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.*	• Appropriate diagrams are contained within the main body of this announcement.
Balanced reporting	• *Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.*	• All gold assay statistics are presented in Appendix A to this announcement for clarity.
Other substantive exploration data	• *Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.*	• All meaningful and material information has been included in the main body of the announcement.
Further work	• *The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).* • *Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.*	• Complete geological mapping and rock-chip sampling across the newly identified anomalies. • Undertake infill soil sampling where warranted. • Further refining the structural interpretation of the project area. • First-pass drill target testing.
